Amendment
Attorney Docket No. M113.2N-10592-US02

Amendments To The Claims:

Claims 1-17 (Cancelled).

18. (Previously Presented) A combination container and applicator comprising:
- a) a container having an outside surface and an interior; and
 - b) said applicator comprising a tube, said tube being formed of material constructed and arranged to be magnetically attracted to the container wherein said tube engages said outside surface of the container for releasable affixation to said outside surface.
19. (Previously Presented) The combination of claim 18, said container comprising a nozzle.
20. (Previously Presented) The combination of claim 19, said tube being constructed and arranged to be coupled to said nozzle.
21. (Previously Presented) The combination of claim 19, wherein the container is under pressure.
22. (Previously Presented) The combination of claim 18, said container being formed of a material constructed and arranged to be magnetically attracted to said tube.
23. (Previously Presented) The combination of claim 18, wherein the tube is constructed of ferromagnetic material.
24. (Previously Presented) The combination of claim 18, wherein the tube is constructed of flexible magnetic material.
25. (Previously Presented) The combination of claim 18, wherein the tube is constructed of iron material.
26. (Previously Presented) The combination of claim 18, wherein the tube is constructed of steel material.
27. (Previously Presented) The combination of claim 18, the container comprising a cylindrical portion having a first length dimension, the tube having a second length dimension which is shorter than the first length dimension.
28. (Previously Presented) A combination container and applicator comprising:
- a) a container having an outside surface and an interior; and
 - b) said applicator comprising a tube, said tube being formed of material constructed

and arranged to be magnetically attracted to the container for releasable affixation of said tube to said outside surface; and

c) the container comprising a cylindrical portion having a first length dimension, said tube having a second length dimension which is shorter than the first length dimension.

29. (Previously Presented) An applicator comprising:

a tube, said tube being formed of material constructed and arranged to be magnetically attracted to a container having an outside surface wherein said tube is releasably affixed to said outside surface.

30. (Previously Presented) The applicator of claim 29, wherein the tube is constructed of plastic ferrite material.

31. (Previously Presented) The applicator of claim 29, wherein the tube is constructed of flexible magnetic material.

32. (Previously Presented) The applicator of claim 29, wherein the tube is constructed of steel material.

33. (Previously Presented) The applicator of claim 29, wherein the tube is constructed of iron material.
